⇒ fun main (args : Array<String>) {  
println ("Hello, This is my first program in kotlin!")  
}  
}

To format code : `ctrl + alt + L`  
(To bring code in perfect format)

⇒ comment in kotlin :

`// println ("Hi I am Jay")`

use to comment (This is called single line comment)

If we want to make comment to all lines :

then, select all the lines  
& press `ctrl + /`

Example :-

Single line comment :

`// println ("Hi I am Jay")`

OR

select + `ctrl + /` {  
`// println ("Hi I am Jay")`  
`// println ("I am from Pune")`

Double line comment:

```
{  
    /* println ("Hi I am Jay")  
    println ("I am from Pune") */  
}
```

for double line comment we use

at starting & ending point.
